Halsted Rain Exhibits New Tower Tank System at Ecobuild 2011

Halsted Rain Ltd will be launching a new Tower Tank Rainwater Harvesting System at Ecobuild 2011 which expands the Company's product range to cover larger domestic and commercial installations up to and including systems with a storage capacity of 3000 litres. This above ground unit is a fully integrated rainwater harvesting system, comprising a filter diverter, twin-tank water storage, pump package and automatic mains water back up.

The introduction of the Tower Tank System follows the successful launch last year of the Company's Super Slim Wall Tank System that has set new industry standards for ease of installation, reliability and affordability. Both products are for harvesting rainwater for toilet flushing and garden irrigation; and are leading the introduction of modular and slim profile systems into the UK construction market.

An entry level Tower Tank System has a storage capacity of 1400 litres and a footprint of only 1400 x 700 cm. Rain diverted from an existing downpipe is filtered via the Company's market leading Frogmouth and Lazy Lizard Filters before being delivered to services via an automatic pump. In the event of there being insufficient stored rainwater to meet demand the system is automatically supplied via a mains water valve mechanism.

Halsted Rain products have proved of particular interest to architects and developers looking for cost effective solutions to help meet the water requirement at Level 3 and above of The Code for Sustainable Homes. Significantly less expensive to install and maintain than underground tanks, these tanks are designed to take up the minimum of space and perform to the highest safety and reliability standards.

"Systems have to be affordable, reliable and easy to install and maintain; and in an urban retrofit situation space-saving above ground tanks are really the only practicable solution " said Graham Cross, Halsted Rain Managing Director, " At Halsted Rain we are focussed on simplifying and reducing the installed cost of rainwater harvesting and it is only by achieving this and expanding the market for these systems can we hope to achieve national water efficiency targets."

About Halsted Rain

Halsted Rain is a leading supplier of urban rainwater harvesting solutions. They offer a range of products including tanks, filters, pumps and accessories specifically designed for above ground rainwater harvesting systems that can be installed in a confined space. These products are ideally suited for installation on domestic and light commercial property particularly as a retrofit solution.
