PRESS RELEASE

Monday, 2nd March 2009

Halsted Rain launch New Rainwater Harvesting System at Ecobuild 2009

An innovative ultra slim rainwater collection and utilisation system will be unveiled in the UK this month at Ecobuild 2009. Unlike the majority of existing rainwater harvesting systems, Halsted Rain is offering an above ground solution specifically designed for installation where space is limited and a low cost solution is required. The system is of modular design, is simple to install and already has a proven track record in other countries.

London based Halsted Rain plan to distribute their system through specialist wholesalers to domestic and light commercial users. They have an ambitious management team behind them with considerable engineering and building trade experience.

Graham Cross, Managing Director said "This system differs from many in that the key components have been specifically selected for their unique design to be quickly and easily installed in a confined space. The end result is a high performance and visually discreet system that offers real value for money. Access to products with these characteristics is essential if we are going to increase the collection and utilisation of rainwater to meet government water conservation targets."

About Halsted Rain

Halsted Rain is a supplier of urban rainwater harvesting solutions. We offer a range of products including tanks, filters, pumps and accessories specifically designed for above ground rainwater collection and utilisation systems that can be installed in a confined space. Our products are ideally suited for installation on domestic and light commercial property particularly as a retrofit solution.
