PRESS RELEASE

Monday 6th July, 2009

Halsted Rain Launch Super Slim Rainwater Harvesting System for Garden Irrigation

An innovative rainwater collection and garden irrigation system has been unveiled in the UK this month by Halsted Rain. It incorporates the company's popular aboveground Super Slim Rainwater Tank and at only 19 cm wide it is the slimmest rainwater tank sold in the UK and ideal for installing where space is limited. The system also includes a Frogmouth downpipe filter and diverter and a pump with electronic controls to supply water on demand. Each wall tank holds 220 litres of rainwater and its modular design means tanks can be easily joined together to provide the desired storage capacity. The system is visually discreet, easy to install and designed to integrate with a wide range of micro irrigation products.

London based Halsted Rain is offering the system through specialist irrigation wholesalers and garden centres to domestic and light commercial users. The launch of this product follows the successful introduction at Ecobuild 09 of the company's slim-line rainwater harvesting system for toilet flushing.

Graham Cross, Managing Director said "This system is easy to install and unobtrusive, and offers a convenient approach to reducing the use of mains water. During summer months as much as 50% of domestic mains water is used for garden irrigation and this level of usage is unsustainable as water stress reaches critical levels in many parts of the UK. The Flood and Water Management Bill currently before Parliament is expected to give new powers to the Government and the water companies to curb the non essential use of mains water during periods of drought making rainwater recovery an essential investment for dedicated gardeners".

About Halsted Rain

Halsted Rain is a supplier of urban rainwater harvesting solutions. They offer a range of products including tanks, filters, pumps and accessories specifically designed for above ground rainwater collection and utilisation systems that can be installed in a confined space. These products are ideally suited for installation on domestic and light commercial property particularly as a retrofit solution.
