

Ecobuild stand no GS45

HALSTED RAIN LIMITED

PRESS RELEASE

Friday 19<sup>th</sup> February, 2010

### **Halsted Rain Exhibits Expanded Range at Ecobuild 2010**

After the successful launch last year of the Super Slim Tank System, Halsted Rain is exhibiting again at Ecobuild with a greatly expanded range of products and a fully integrated above ground rainwater harvesting system.

New at this year's show are the companies fine mesh 2<sup>nd</sup> stage filter, 'plug & play' booster pump package, electrical mains top up valve and the innovative RainAid mechanical mains inlet valve. All will be displayed as part of an integrated system for collecting and utilising rainwater for toilet flushing and micro irrigation. The modular design and ultra slim profile of the system make it ideal for installing as a retrofit solution and where space is limited.

The Halsted Rain product has proved of particular interest to architects and developers looking for solutions to help meet the water requirement at Level 3 and above of The Code for Sustainable Homes. Equally it offers an affordable and easy to install retrofit solution for those seeking to reduce mains water consumption in domestic and light commercial property.

The Super Slim Rainwater Harvesting System is now available throughout the UK via a growing number of specialist resellers and installers.

"Systems have to be affordable, reliable and easy to install and maintain" Graham Cross, Managing Director said " At Halsted Rain we are focussed on simplifying and reducing the installed cost of rainwater harvesting and it is only by achieving this and expanding the market for these systems can we hope to achieve national water conservation targets."

#### **About Halsted Rain**

Halsted Rain is a leading supplier of urban rainwater harvesting solutions. They offer a range of products including tanks, filters, pumps and accessories specifically designed for above ground rainwater collection and utilisation systems that can be installed in a confined space. These products are ideally suited for installation on domestic and light commercial property particularly as a retrofit solution.
