

Ultra Slim Wall Tank

A no compromise 235 litre rainwater storage tank, hidden wall bracket and two pre-installed blank water outlet fittings. Access cover, plastic tap, and rainwater harvesting accessories available as optional extras. Compatible with a range of popular hose fittings that can be attached to the outlet as required (not supplied).

This Ultra Slim Wall Tank is the narrowest high capacity tank available for rainwater harvesting and sustainable drainage solutions. Its unique design makes it very space efficient and visually discreet. Multiple tanks can be nested together with an optional connection kit to provide the storage capacity required. It is easy to install and exceptionally durable. Tanks must be installed on a firm foundation or mounted on a load bearing shallow plinth to enable easier access to a tap or hose connector.

The Ultra Slim Wall Tank offers the following benefits compared with a conventional water butt.

- **Ultra slim tank**, each 180 x 80 x 20cm including hidden steel wall fixing bracket, capacity nominally 235 litres.
- **Pre-installed brass outlet fitting**, with female $\frac{3}{4}$ " BSP thread for connecting a tap or hose coupling of your choice.

- **Modular design**, for either single or multiple tank installation. Tank coupling kit available on request.
- **SUDS solution**, suitable for separating rain from foul water to facilitate retention and percolation at source.
- **Visually discreet**, slim profile making it ideal for installation along side walls and in narrow passages. Standard colour marble green granite and other colours available by special order. Simple to screen or otherwise disguise if preferred.
- **Easy to install**, using DIY tools.
- **Range of accessories**, including downpipe filter diverter
- **Child proof design**, optional access hole for arm access only.

The Ultra Slim Wall Tank is a proprietary design manufactured in the UK to the highest standards using advanced technology and incorporates:

- An opaque 5mm thick medium density polyethylene tank shell.
- A stabilizer for high levels of UV protection and durability.
- A hidden steel fixing bracket for permanent and secure installation.

About Halsted Rain

Halsted Rain is a supplier of urban rainwater harvesting and water management systems. We offer a range of modular tanks, filters, pumps, mains top up kits and treatment units designed for installation above and below ground that offer simple and affordable solutions when space and access is restricted, or ground conditions are poor. Our products are ideally suited for residential and light commercial property particularly as a retrofit solution.
